

Tax Connectors

SOLUTION FACTSHEET

SYSPRO Tax Connectors integrates with the best-of-breed tax calculation systems to help manufacturers and distributors reduce the hassle and complexity of tax compliance at every stage. This allows organizations to make the best use of their finance department resources.

Tax Connectors provides a seamless, low code, integration to tax calculation systems such as Avalara and Vertex. This provides a direct, native integration between SYSPRO ERP and several tax providers to handle compliance with transactional taxes, including sales tax.

The Benefits of Tax Connectors

■ Reduce compliance risk

Tax Connectors connects to tax calculation systems that are up-to-date with the latest regulatory requirements to ensure that manufacturers and distributors are compliant, giving them confidence that their tax is being assessed correctly.

■ Simplify ever-increasing tax complexity

The tax compliance landscape is difficult to navigate due to the myriad of confusing and ever-changing rules with which manufacturers and distributors are expected to comply. This is further complicated by the existence of tax exemptions. Organizations are expected to be aware of and manage tax exemptions for all of their customers. Tax Connectors simplifies this by connecting with tax systems with all the relevant rules automatically applied.

■ Automatically calculate tax rates

Tax Connectors integrates with tax calculation systems that automatically execute tax determination for transactions. This removes a huge resource drain on the in-house finance department as tax is correctly managed and tax exemptions are applied where necessary.

Product Version:

SYSPRO 8

Sectors:

Manufacturing and Distribution

Industries:

- Automotive Parts and Accessories
- Electronics
- Fabricated Metals
- Food and Beverage
- Industrial Equipment and Machinery
- Packaging
- Plastics and Rubber

Technical Requirements:

- e.net System Manager
- Sales Orders
- Tax Connectors: Avalara/Tax Connector; Vertex
